Product Information

SMD Double Splice Tape

SMD Double Splice Tapes provide for easy, quick and reliable joining of 8mm paper SMD tapes without the need for any special tools or fixtures! The raised dots of the clear plastic carrier engage with the sprocket holes and align the tapes perfectly.

Hints for using SMD Double Splice Tape:

- When peeling off the opaque cover tape from the Tape Connector please ensure that the yellow adhesive strips remain attached to the clear plastic carrier.
- To avoid inaccurate or overlapping joints cut each SMD tape squarely across a sprocket hole so that slightly less than half a hole remains on each face.
- For some types of tape it may be necessary to ease the start of the cover tape off the component carrier tape for a distance of just one millimetre to ensure that the cover tape is lifted off without a break.
- Apply the strip as shown, fold the other half over the now joined SMD tapes and press firmly together.
- The clear plastic carrier is removed from the tape joint and discarded!
